## Tuff TTL Wireless TTL Flash Trigger

**Tuff by name. Tough by nature.**

Hähnel firmly believe that their products help photographers 'make' a great image and this statement most definitely rings true with the newly launched Tuff TTL for Canon.

Whether you prefer to be outside capturing the wildlife or inside the studio shooting mood photography such as portraits, this wireless flash trigger will prove to be a very useful piece of kit for both professional and amateur photographers alike.

Priced very competitively, the Tuff TTL is exceptionally well-made. Designed with durability in mind, the product has been constructed using resilient tough rubber giving the photographer peace of mind against any accidental impact.

Special attention has been given to the strength of the housing and in particular an additional reinforcement collar on the neck of the transmitter which gives additional durability.

The transmitter and receiver are covered by a silicon rubber case to protect against wear and tear and to absorb some of the energy created on impact, thereby preventing damage to the product.

A strong ISM 2.4Ghz wireless transmission control ensures reliable & dependable triggering of the flash with a range of over 200m.

Digital channel matching provides reliable TTL connections and eliminates the risk of interference from other wireless products within range.

The Tuff TTL is very user-friendly with easy to use controls and is powered by the most convenient power source - 2 x AA batteries (2 each in the transmitter & receiver).

Currently available for Canon.
